

Right Networks Security Awareness Training

Ensure cyber risk reduction and regulatory compliance with ongoing training and testing for your employees

Human error accounts for 85% of all security breaches.¹

Employee education will always be your best line of defense. Gain enterprise-grade security training specifically tailored to accounting and finance professionals and reduce the human cyber risk at your business with Right Networks Security Awareness Training.

Features

Security Training Modules

Train your employees on the most current and relevant topics including work-from-home safety, phishing, ransomware and password security.

Industry-Themed Simulated Phishing

Fully managed monthly email phishing campaigns reinforce the training with an expansive library of realistic scenarios.

Dark Web Monitoring

Get alerted if any of your organization's information has been compromised or stolen.

Dark web activity has increased by 300% over a three-year period.²

What is Dark Web Monitoring?

The dark web is used to sell information that has been stolen by hackers and cybercriminals. Dark Web Monitoring, a feature included with every Security Awareness Training subscription, adds increased protection by continuously scanning the dark web for illicit activity having to do with your business.

¹ Verizon, 2021

² Bitfury, 2020

A fully managed Security Awareness Training solution

Compliance regulations require you to keep your team up to date with regular security awareness and training. One-time security training programs are outdated. Get complete ongoing cybersecurity education courses with Right Networks Security Awareness Training.

- ✓ **All-in-one, enterprise-grade security training solution**
