Right Networks®

Right Networks Managed Security

Protect your data. Secure your devices. Educate your employees. One simple solution.

In 2022, **ransomware attacks increased by 13%** from just the year before. Not only that, but **82% of breaches involve a human element**.[1] Are you— and your employees—prepared to defend your business?

Right Networks has long been the industry's trusted leader for cloud hosting, but your devices also need protection.

When you work outside the cloud—checking email, browsing websites, using non-hosted applications—your devices are left open to potentially devastating and costly cyberattacks. Plus, even your most security-savvy employees are the target of phishing attacks.

Avoid these threats and get peace of mind with Right Networks Managed Security, backed by industry-leading U.S.-based support, available 24/7.

Features

	Right Networks Managed Security
Right Networks response and remediation to security incidents	✔

Right Networks®

Stay customer-focused with Right Networks Managed Security

Guard data, detect threats, empower employees and defend your business.

Using our national scale and proven technical expertise, Right Networks Managed Security delivers enterprise-level security that lets you sleep at night—all at a price that won't break your budget.

No need to worry about evaluating and choosing separate antivirus, backup or 24/7 security monitoring providers—get it all with Right Networks Managed Security.

✓ Our team is focused on accounting and finance professionals and has an in-depth understanding of workflows, applications and the FCC's recommendations for small business cybersecurity.[2]

✓ We offer the ease of one-click installation. Simply download the software—we'll set up and configure your laptops or desktops.

✓ Do your employees need access to on-demand training? We've got them covered. We'll also deploy automatic phishing simulations to keep them cyberaware.

✓ Flexible monthly packages and no long-term commitments means businesses can secure their temporary employees' laptops or desktops.

330 Number of ransomware attacks per hour in 2021.[3]

$2.35M Average cost of a data breach on a small business in 2020.[4]
