

Introducing Right Networks Managed Microsoft 365

Elevate your 365 productivity with expert management and unmatched security

If your firm or small business uses Microsoft 365 or Office 365 applications every day, you need more than just a license.

Microsoft customers should use a third-party data backup solution. If you're using Microsoft as your only disaster recovery plan, your data could be at risk. Plus, you may not have a comprehensive approach to email security that protects employees across devices.

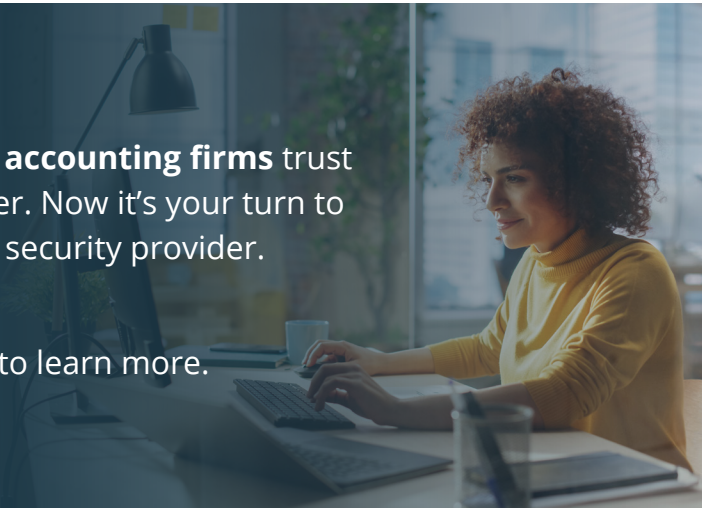

Managed Microsoft 365 goes beyond just licensing

With Right Networks, you'll receive:

- ✓ Flexible, monthly Microsoft 365 or Office 365 licensing across our E3, Business Basic or Apps for Enterprise packages.
- ✓ Granular backup that enables rapid recovery of your Microsoft 365 data.
- ✓ Exchange Online email protection available across devices, so your email is always safe from spam, phishing, spoofing and other cyberthreats.*
- ✓ Protection against malicious account takeover, ensuring uninterrupted access to vital Microsoft 365 applications and data.*
- ✓ Best-in-class 24/7 support with our security team monitoring your backups and email security.

Your applications—Exchange Online, OneDrive for Business, SharePoint Online and Teams—all contain critical business and client data. Protect them today with Right Networks Managed Microsoft 365.

*Managed email security and account takeover protection is only available for our Managed Microsoft 365 Business Basic and Managed Office 365 E3 customers.

Over 60,000 small businesses and more than 10,000 accounting firms trust Right Networks as their one-stop cloud services provider. Now it's your turn to make Right Networks your one-stop Microsoft 365 and security provider.
